

THANK YOU FOR YOUR PURCHASE OF THE
BPMC FRITZ DECONTROLLER
GLITCH VIDEO FX PROCESSOR
BY BIG PAUPER FOR BPMC 2017
GLITCHART.COM

NTSC 2XRCA SD COMPOSITE VIDEO
POWER SUPPLY: 12V 1000MA ONLY. 110V ONLY.

NOTE: THE FRITZ DECONTROLLER IS NTSC ONLY AND WILL NEED
A CONVERTER FOR USE WITH PAL VIDEO GEAR.

NOTE: FOR BEST RESULTS USE WITH A CRT TV.
PROJECTOR DROPOUT MAY OCCUR WITH SOME FX.
DO NOT OPERATE UNDER THE INFLUENCE OF
SYNTHETIC CANNABINOIDS OR MEPHEDRONE.

Author's notes: I started doing these guys up in 2012 or so after Videonics Equalizers started getting expensive. The Fritz Decontroller in it's original form is a primitive digital titler from Videonics (who was killin' it in the early 90's). While the titler functionality was useful, I found bypassing the whole shabang and tapping into the vast arsenal of corrupted analog and digital effects much more to my liking. In the toolbox the device presents you you will discover a strange assortment of destabilized color processing effects, digital tracers and analog ringing artifacts. I was always a big fan of these things as a number of the effects strongly resemble some of the illustrative effects on the original Video Toaster on the Amiga 2500. I hope you have fun expressing yourself through this device. All da best.

LAYOUT:

The top twelve knobs are part of the digital color processing engine. This is a mish mash of color skews, light destabilization fx and cool tracer effects. They all have a pretty soft and grainy look. Depending on the Fritz circuit revision the grain amount can vary. One particular model produces very large granules (not your unit). You can stack effects but bare in mind that each effect is designed to stand on it's own. Please take care not to activate all effects at once as this may stress the circuit... but by all means, combine and sculpt new looks. The bottom four knobs are edge processing (ringing) effects from the analog portion of the circuitry. By combining and varying these knobs you can hone in on some of those interesting lofi science fiction looks the kids all seem to be going crazy over. Of course you can combine the bottom analog processing section with the top.

Notes: Control-jack is non-functional. If your unit features Svideo it's functionality has not been tested nor can all effects be guaranteed when using it. Audio inputs and outputs do nothing as well.
